

Questions?

Chapter 5 Solving

Objective:

Be able to solve more challenging equations.

IC 5-4, 5-13, 5-14, 5-15

If we get there:

HW 5-18 to 5-29

5-1

What strategies could you use to solve:
 $(x + 3)^2 - 5 = 4$

5-4

Solve & check your answer

$$4|8x - 2| = 8$$

5-4

Solve & check your answer

$$3\sqrt{4x-8} + 9 = 15$$

5-4

Solve & check your answer

$$(2y - 3)(y - 2) = -12y + 18$$

5-4

Solve & check your answer

$$(x - 3)^2 - 2 = -5$$

5-4

Solve & check your answer

$$\frac{5}{x} + \frac{1}{3x} = \frac{4x}{3}$$

5-4

Solve & check your answer

$$|3 - 7x| = -6$$

5-4

Solve & check your answer

$$\frac{6w-1}{5} - 3w = \frac{12w-16}{15}$$

5-4 end of 5.1.1

Solve & check your answer

$$(x + 2)^2 + 4(x + 2) - 5 = 0$$

October 10, 2018

5-13

Extraneous Solutions

Solve & check your answer

$$0.5|x - 3| + 4 = 2$$

Solve

$$\sqrt{x} = 3\sqrt{x+2}$$

How many times can these two relations intersect?

1. a line and a parabola
2. two different parabolas
3. a parabola and a circle
4. a parabola and the hyperbola $y = 1/x$
5. the hyperbola and a circle

5-14

Solve & check your answer

$$2x^2 + 5x - 3 = x^2 + 4x + 3$$

5-14

Do these two equations have a relationship?

$$2x^2 + 5x - 3 = x^2 + 4x + 3$$

$$y = x^2 + x - 6$$

5-15

Try solving this algebraically.

$$20x + 1 = 3^x$$

5-15

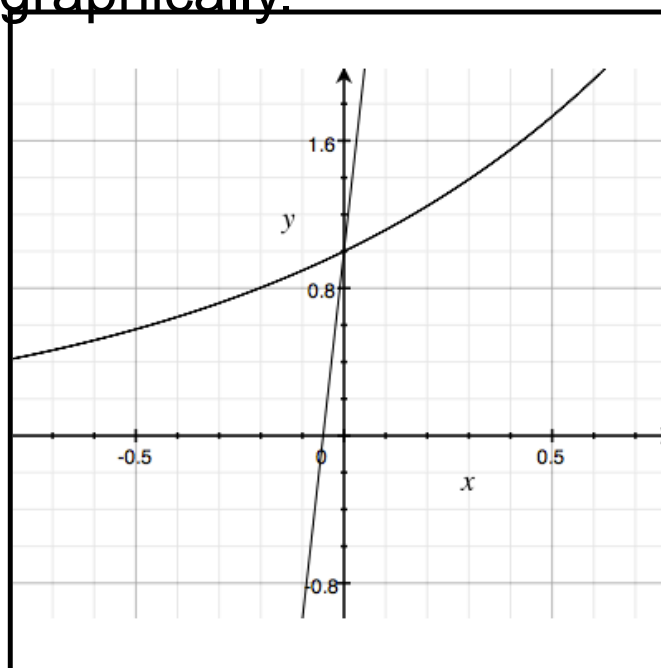

Try solving this graphically.

$$20x + 1 = 3^x$$

5-15

Try solving this graphically.

$$20x + 1 = 3^x$$

Find the equation that can be solved by examining the intersections of these functions.

(Get rid of denominators first)

$$f(x) = \frac{12}{x} \quad g(x) = -(x-3)^2 + 4$$

What sort of functions are they?

Are A and B the only solutions?

Find the intersection points of:

$$x^2 + y^2 = 25 \text{ and } y = \frac{1}{7}(x - 4) - 3$$

HW 5-18 to 5-29
